

A Smarter Access Control Solution

For College and University Campuses

Modern access solutions utilizing smartphone credentialing improve overall security and safety, reducing theft, deterring vandalism, and simplifying daily operations. It also puts access management at the fingertips of campus admins and police without the cost and complexity of traditional access control platforms.

Kindoo Delivers...

- Enhanced campus-wide access protection
- Emergency lockdown capabilities
- Easy and convenient user operation
- Remote management
- Simplified visitor and event management
- Cost reduction and future savings
- Detailed audit reports
- Easy system expansion
- Personal privacy protection
- Greater inclusivity and ADA accessibility

Kindoo allows system admins to instantly and remotely create or revoke access permissions, granting permissions-based entry to specific campus locations and/or multiple facilities, eliminating the time and expense of managing and/or recovering physical credentials. Additionally, Kindoo integrates with HR and scheduling software, helping ensure that only the employees who are scheduled to work can enter restricted areas at the appropriate times.

Why Kindoo is Different...

- Eliminates costly physical access credentials
- Works with ANY electronic locking device
- Reduces costs by eliminating the need for expensive infrastructure
- Delivers easy and convenient remote credential management
- Ensures unlimited scalability for expansion across campus

Common Electronic Access Challenges	Kindoo Solutions
Too expensive to implement conventional electronic access control.	Kindoo works with any existing electronic locking device and offers wireless and wired solutions to enable electronic access on any door without expensive controllers or IT infrastructure.
University staff are often overwhelmed with managing thousands of credentials every semester for students, faculty, and staff plus temporary credentials for visitors and contracted workers.	Kindoo smartphone credentials eliminate the cost and hassle of managing physical credentials, make it easy to grant and revoke access, and can integrate with existing HR systems to automate access management.
Cards get lost, loaned to friends, or stolen, and you often do not find out until someone's already used one to access a restricted area.	Smartphones verify that the authorized person is physically present before doors unlock, which prevents sharing. If someone loses their phone, you can deactivate their credential immediately from anywhere.
Managing visitor credentials is time consuming and expensive.	Visitors can be issued time-limited mobile credentials that expire automatically when their scheduled visit ends and provide detailed records of access activity.
Manual lock downs can take precious time during active threats, without the assurance that every door has been secured.	Kindoo lets authorized admins instantly lockdown the entire campus remotely in seconds from their phone or computer. All actions are logged so you can review exactly what happened and when.

Kindoo can help better secure your campus, reduce exposure to liabilities, and actually reduce security and operations expenses.

Let us show you why education facilities around the world are looking to Kindoo for a smarter solution.
